

ANGAD MUTHYALA

DevOps Engineer · Cloud & Infrastructure · Backend Developer

Mumbai, India · +91-8779263718 · angadmuthyala@gmail.com · [GitHub](#) · [LinkedIn](#)

SUMMARY

DevOps Engineer and Backend Developer who has shipped a live SaaS product and built its full CI/CD, observability, and secrets infrastructure from scratch. Designs multi-stage GitHub Actions pipelines with Trivy and SonarCloud gates, provisions AWS EKS clusters via Terraform with OIDC auth, and runs GitOps delivery through ArgoCD with blue-green rollouts backed by Prometheus analysis templates. Writes the backend too — NestJS APIs, PostgreSQL schemas, and the Grafana dashboards that tell whether they're holding up.

TECHNICAL SKILLS

CI/CD & GitOps	GitHub Actions · ArgoCD · Helm · Argo Rollouts · GitOps two-repo pattern
Cloud (AWS)	EC2 · S3 · VPC · IAM · ECR · EKS · AWS Config · OIDC Auth · CloudWatch
Infrastructure	Terraform · Ansible · Checkov · tfsec · HashiCorp Vault · Sealed Secrets
Containers & K8s	Docker · Kubernetes · Helm · RBAC · Ingress · HPA · Kustomize
Observability	Prometheus · Grafana · Alertmanager · Fluent Bit · OpenSearch · OpenTelemetry
Security	Trivy · SonarCloud · OWASP · OPA/Kyverno · AWS Config Rules
Languages	Python (boto3, FastAPI) · Go · TypeScript · Bash
Backend & DBs	NestJS · Node.js · Flask · PostgreSQL · MySQL · Elasticsearch · REST APIs

EXPERIENCE

Backend Developer · AI BI Street Pvt. Ltd

Nov 2025 – April 2026 | Mumbai, India

Interview Screener — dev.screener.scrollverse.site · Stack: NestJS · Next.js · PostgreSQL · Docker · GitHub Actions

- Sole backend engineer on a live SaaS product — automated video-response interviews with active recruiter and candidate accounts in production since Nov 2025.
- Designed and shipped the full interview lifecycle — question sets, timed video response recording, candidate onboarding flows, and token-signed magic-link authentication with no password storage.
- Containerised the application with Docker and wired a GitHub Actions pipeline that builds, tests, and deploys to production on every merge to main — replacing a manual deploy process.
- Instrumented the backend with prometheus-client exposing /metrics; built a Grafana dashboard tracking API latency, error rate, and throughput.
- Architected the subscription model with middleware-level feature gating, and defined the REST API contract across two user roles (recruiter and candidate) — schema, auth guards, and error handling included.

PROJECTS

Production CI/CD Pipeline — GitHub Actions + Terraform + AWS EKS

[GitHub](#)

- Designed an 8-stage GitHub Actions pipeline — lint, SonarCloud SAST, Docker build, Trivy CVE scan, ECR push, Terraform apply, EKS deploy, boto3 smoke test — with hard-fail gates at each security step.
- Provisioned AWS infra (VPC, EKS, ECR, S3, IAM) via Terraform modules with remote state in S3 + DynamoDB lock; used OIDC auth — zero long-lived AWS keys in CI.
- Added Checkov and tfsec IaC security gates; enforced hard-fail on CRITICAL misconfigs and resolved 12 real violations surfaced by the scanners.
- Deployed kube-prometheus-stack via Helm; authored PromQL alerting rules routed to Slack through Alertmanager; built a Grafana dashboard surfacing pod CPU, memory, request rate, and error budget in a single view.

Stack: [GitHub Actions](#) · [Terraform](#) · [AWS](#)

[EKS/ECR](#) · [Docker](#) · [Helm](#) · [Prometheus](#) · [Grafana](#) · [Trivy](#) · [SonarCloud](#) · [Checkov](#) · [Python boto3](#)

GitOps Platform — ArgoCD + Vault + Blue-Green Delivery on Kubernetes

[GitHub](#)

- Implemented two-repo GitOps: CI updates only the Helm values image tag in a config repo — ArgoCD auto-syncs to EKS within 3 minutes. Zero kubectl in CI pipelines.
- Configured Argo Rollouts blue-green strategy with a Prometheus analysis template — auto-promotes if error rate < 1%, auto-aborts on breach.
- Deployed HashiCorp Vault on Kubernetes with Agent Injector — eliminated every hardcoded secret from the codebase, replacing them with dynamic injection at pod start; Sealed Secrets handles git-committed encrypted values that only the cluster can decrypt.

Stack: *ArgoCD · Argo Rollouts · Helm · Kubernetes · Vault · Sealed Secrets · GitHub Actions · AWS EKS*

Go Profiler — CLI Performance Analyzer for Go

[GitHub](#)

- Parses Go source files using the AST to flag anti-patterns — string concatenation inside loops, deferred calls in hot paths, unnecessary allocations — and prints file-and-line-level fix suggestions to stdout.

Stack: *Go · Static Analysis · CLI*

LEADERSHIP & COMMUNITY

Campus Lead · FossUnited

2024 – 2025

- Founded the campus FOSS chapter under FossUnited; ran workshops on Git, Linux tooling, and open-source contribution workflows — 50+ students shipped their first pull request to a public repository as a direct result.

EDUCATION

B.E. in Computer Science · University of Mumbai

Graduated Apr 2026
