

Angad Muthyala

Backend Developer · DevOps Engineer

Mumbai, India | +91-8779263718 | angadmuthyala@gmail.com | [GitHub](#) | [LinkedIn](#)

SUMMARY

Backend Developer with hands-on infrastructure experience — designing NestJS APIs, optimizing PostgreSQL schemas, and provisioning Terraform-managed AWS/EKS environments with automated CI/CD pipelines. Skilled across the full lifecycle, spanning database design through to production deployment, observability, and maintenance.

TECHNICAL SKILLS

Backend: NestJS, Node.js, PostgreSQL, Prisma, Redis, REST APIs, JWT

Languages: TypeScript, Python (boto3, FastAPI), Go, Bash

Database & Auth: PostgreSQL, Prisma ORM, Redis (Upstash), JWT, Passport, bcrypt

CI/CD & GitOps: Jenkins, GitHub Actions, ArgoCD, Helm

Cloud & Infra: AWS (EC2, EKS, ECR, VPC, IAM, S3), Terraform, Docker, Kubernetes

Observability & Security: Prometheus, Grafana, Trivy, SonarQube, OWASP, HashiCorp Vault

EXPERIENCE

Backend Developer Intern

Nov 2025 – April 2026

AI BI Street Pvt. Ltd — Interview Screener

Mumbai, India

- Sole backend engineer on an AI-powered video interview platform (NestJS, Next.js, PostgreSQL) in production with active recruiter and candidate workflows
- Built the full interview lifecycle: WebRTC video recording with chunked uploads, candidate invite flows, and passwordless magic-link auth across three user roles
- Designed an async media pipeline (BullMQ + Redis) for video compression, transcription, and LLM-based evaluation, with retry and job persistence
- Built an AI interview-prep generator — ingests PDF resumes and job URLs, runs a 3-pass Groq editorial pipeline (generate, critique, rewrite) into structured PDF prep materials
- Migrated storage from local disk to Cloudflare R2, removing a recurring class of upload failures and enabling presigned-URL streaming
- Built the subscription layer — feature gating, usage limits, and the REST contract with JWT auth and a Prisma-backed schema

PROJECTS

Production CI/CD Pipeline | Jenkins, Terraform, AWS EKS

[GitHub](#)

- 8-stage Jenkins pipeline (lint, SonarCloud SAST, Docker build, Trivy scan, ECR push, Terraform apply, EKS deploy, smoke test) with hard-fail gates at every security step
- Terraform-provisioned AWS infra (VPC, EKS, ECR, S3, IAM) with OIDC auth — zero long-lived keys in CI — and Checkov/tfsec gates that caught 12 real misconfigurations

Reddit App Deployment on Amazon EKS | Jenkins, Terraform, ArgoCD, DevSecOps

[GitHub](#)

- Jenkins pipeline provisioning EKS via Terraform and gating every image build with SonarQube, OWASP Dependency-Check, and Trivy before push
- ArgoCD GitOps sync (auto-prune, self-heal) with Prometheus/Grafana monitoring exposed via LoadBalancer

Go Profiler | CLI Performance Analyzer for Go

[GitHub](#)

- Static analysis CLI that parses Go source via AST to flag performance anti-patterns with file-and-line-level fix suggestions

LEADERSHIP & COMMUNITY

Campus Lead

2024 – 2025

FossUnited Forum

- Founded and ran the campus FOSS chapter — workshops on Git, Linux, and open-source contribution helped 50+ students land their first pull request

EDUCATION

University of Mumbai

B.E. in Computer Science

Mumbai, India

Graduated Apr 2026
